

## Dripped Wax Resist With Watercolor

Explore the exciting possibilities of combining melted wax with watercolor. We will drip and draw gestural lines with liquefied beeswax. Then we will develop our artwork with watercolor glazes.

The wax dries quickly to offers a graceful resist for your watercolors, combining an important textural element with a fluid medium.

(Four hour workshop)

### Materials List

Please bring the following materials to class:

- **watercolor paper (140 LB cold press)**  
(You can buy it in blocks or in separate sheets and cut to desired size)
- **a rigid supportive non porous backboard slightly larger than your paper**  
(Plexiglass works well for this. It can be purchased at MacNeil glass, Lowes or Home Depot)
- **artist tape or masking tape**
- **tubes of watercolor paint (artist grade preferred)**
- **watercolor brushes**
- **a misting bottle**
- **a roll of paper towels**
- **water jar or other container for rinsing brushes**
- **2B pencil and a kneaded eraser**
- **an inexpensive sketchbook** (for planning paintings and testing colors)
- **white plate, tray or palette lid for mixing colors**
- **containers for pooling separate wash colors** (plastic cups or bowls or a muffin tin with areas openings large enough for a wash brush )
- **small sea sponge**
